Profile

A highly motivated and detail-oriented Computer Science graduate from Bina Nusantara University with a strong foundation in web development, endpoint management, and technical support. Passionate about ensuring reliable and secure IT operations, I combine technical knowledge with user-focused problem-solving to maintain efficient digital systems and responsive user experiences. Currently, I am interning at Peruri, within the Internal Application Development Section of the Department of Technology and Information, where I develop and maintain internal web-based applications using Laravel (PHP) and MySQL to support the company's digital infrastructure. Alongside development, I assist in monitoring system performance, handling troubleshooting requests, configuring user access, and maintaining endpoint reliability to ensure smooth and secure operations across departments. This experience has strengthened my ability to act as a bridge between users, systems, and infrastructure teams, combining communication skills with technical expertise in areas such as network connectivity, software configuration, system monitoring, and user support. With adaptability, precision, and a commitment to continuous learning, I am driven to contribute to environments that prioritize system stability, operational security, and seamless user interaction within complex IT ecosystems.

Education

Bachelor of Computer Science

08/2019 – 10/2024

Bina Nusantara (Binus) University

I hold a Bachelor of Computer Science degree with a minor in Frontend Development and UI/UX, blending technical expertise with strategic insights to address modern business challenges, graduate with a GPA of 2.67. Alongside my academic journey, I actively contributed to campus organizations, taking responsibility for computer hardware operations in various events. This hands-on experience not only enhanced my technical skills but also developed my problem-solving abilities and teamwork, reflecting my dedication to both personal and organizational growth.

Internship Experience

Web Developer

07/2025 – Present

PERURI

As a Web Developer Intern at Peruri, I am responsible for designing, developing, and maintaining internal web-based applications that support the company's operational efficiency and digital transformation. Using Laravel (PHP framework) as the primary backend technology, I collaborate with internal teams to design, implement, and optimize systems such as attendance dashboards, visitor logs, and internal monitoring tools that streamline workflow and data management across departments. My daily work includes building backend logic with PHP, designing responsive user interfaces using HTML, CSS (Bootstrap/Tailwind), and JavaScript, as well as integrating structured databases in MySQL. In parallel, I am also learning and developing frontend components using React, applying it to improve modularity, interactivity, and maintainability of user interfaces within internal applications. Beyond development, I provide technical assistance and troubleshooting support for internal users, ensuring smooth system performance and helping resolve operational issues promptly. I also participate in testing, documentation, and feature validation to ensure each system aligns with functional and business requirements. Through this role, I have strengthened my skills in full-stack web development, React-based frontend development, API integration, and database management, while also enhancing my communication, documentation, and coordination abilities when working with both technical and non-technical teams. This experience has given me a well-rounded understanding of how technology supports administrative, compliance, and user-facing functions within a large-scale organization, and how effective collaboration can transform technical solutions into real operational value.

Business Development and Social Media Specialist

08/2022 – 02/2023

Ramuan Jkt

As a Business Development and Social Media Specialist Intern at Ramuan Jkt through the Kampus Merdeka program, I gained valuable experience at the intersection of innovation and marketing. I designed unique beverage blends that harmoniously combined herbal ingredients with modern flavors, showcasing creativity and product development expertise. Leveraging social media and e-commerce platforms, I successfully promoted these products, achieving remarkable results by selling 100 bottles in the first week during the Binus Exhibition. My efforts in developing and marketing Ramuan Jkt's products earned recognition as a Top 20 Finalist at the Wirausaha Merdeka Universitas Bina Nusantara Fair, along with an official certificate from the event. This experience honed my skills in product innovation, digital marketing, and strategic planning, demonstrating my ability to deliver impactful results in competitive environments.

Project Development
Kopi Langgeng

02/2022 – 08/2022

As a Project Development Intern at Kopi Langgeng, a coffee shop in West Jakarta, I had the opportunity to contribute significantly to the establishment and operational success of the business as part of my campus credit requirements. I designed and implemented a robust project framework utilizing PHP and CSS, creating a solid foundation for the shop’s digital infrastructure. My role extended beyond technical development, encompassing the formulation of unique coffee blends and the creation of strategic marketing initiatives to enhance product visibility and customer engagement. Additionally, I managed budgets, tracked expenses, and ensured financial efficiency, demonstrating strong organizational and analytical capabilities. This experience allowed me to refine my technical, creative, and managerial skills, equipping me to contribute effectively to future professional endeavors.
