Profile

Technical Writer at Peruri Digital Security (PDS) with a Computer Science degree from Bina Nusantara University and hands-on web development experience in Laravel (PHP), React, and MySQL. I document web applications for PERURI, from requirements and functional specifications to technical documentation, UAT, and user guides, working between developers and business users. I read application code and APIs to keep documentation accurate and consistent with the actual system.

Education

Bachelor of Computer Science **08/2019 – 10/2024**
Bina Nusantara (Binus) University

I hold a Bachelor of Computer Science degree with a minor in Frontend Development and UI/UX, blending technical expertise with strategic insights to address modern business challenges, graduate with a GPA of 2.67. Alongside my academic journey, I actively contributed to campus organizations, taking responsibility for computer hardware operations in various events. This hands-on experience not only enhanced my technical skills but also developed my problem-solving abilities and teamwork, reflecting my dedication to both personal and organizational growth.

Work Experience

Technical Writer **05/2026 – Present**
Peruri Digital Security (PDS)

As a Technical Writer at Peruri Digital Security (PDS), I prepare and maintain requirement and functional documentation (BRD, FSD) and technical specifications (TSD, REST API) for web applications used at PERURI, keeping them aligned with the actual system by reviewing application code, API documentation, and database structure. I write UAT scenarios and acceptance documents, including a 38-scenario UAT for an employee onboarding portal followed by 25 revised scenarios, and I produce user-facing documentation such as five role-based user manuals and an operational handover checklist. I also document project meetings, turning discussions and transcripts into structured minutes and requirement inputs, and act as a link between the development team and PERURI business and IT users. To keep documents consistent across projects, I build reusable templates and guidelines (TSD, BRD, FSD, UAT).

Web Developer Intern **07/2025 – 05/2026**
PERURI

As a Web Developer Intern at PERURI, I developed and maintained internal web applications such as attendance dashboards, visitor logs, and monitoring tools, using Laravel (PHP) and MySQL, with responsive interfaces built in HTML, CSS (Bootstrap/Tailwind), and JavaScript. I also built frontend components in React. I tested and validated features against functional requirements, handled troubleshooting requests from internal users, and worked with technical and non-technical teams to turn operational needs into working features. This gave me a working understanding of application flow from database to user interface, which now supports my documentation work.

Business Development and Social Media Specialist **08/2022 – 02/2023**
Ramuan Jkt

As a Business Development and Social Media Specialist Intern at Ramuan Jkt through the Kampus Merdeka program, I gained valuable experience at the intersection of innovation and marketing. I designed unique beverage blends that harmoniously combined herbal ingredients with modern flavors, showcasing creativity and product development expertise. Leveraging social media and e-commerce platforms, I successfully promoted these products, achieving remarkable results by selling 100 bottles in the first week during the Binus Exhibition. My efforts in developing and marketing Ramuan Jkt's products earned recognition as a Top 20 Finalist at the Wirausaha Merdeka Universitas Bina Nusantara Fair, along with an official certificate from the event. This experience honed my skills in product innovation, digital marketing, and strategic planning, demonstrating my ability to deliver impactful results in competitive environments.

Project Development **02/2022 – 08/2022**
Kopi Langgeng

As a Project Development Intern at Kopi Langgeng, a coffee shop in West Jakarta, I had the opportunity to contribute significantly to the establishment and operational success of the business as part of my campus credit requirements. I designed and implemented a robust project framework utilizing PHP and CSS, creating a solid foundation for the shop's digital infrastructure. My role extended beyond technical development, encompassing the formulation of unique coffee blends and the creation of strategic marketing initiatives to enhance product visibility and customer engagement. Additionally, I managed budgets, tracked expenses, and ensured financial efficiency, demonstrating strong organizational and analytical capabilities. This experience allowed me to refine my technical, creative, and managerial skills, equipping me to contribute effectively to future professional endeavors.
